## Lab #4: ROS2 using RCLPY in Julia

## Abdelbacet Mhamdi Senior-lecturer, Dept. of EE ISET Bizerte — Tunisia a-mhamdi

## Exo 1: Minimal Publisher/Subscriber Setup

The combination of Julia and rclpy opens up opportunities for developing efficient and performant robotics applications with the benefits of ROS2s ecosystem.

Make sure to read the instructions thoroughly, follow each step precisely, and ask for clarification if needed.

We begin first of all by sourcing our ROS2 installation as follows:

source /opt/ros/humble/setup.zsh

Always start by sourcing ROS2 installation in any newly opened terminal.

Open a *tmux* session and write the instructions provided at your Julia REPL.

```
using PyCall
# Import the rclpy module from ROS2 Python
rclpy = pyimport("rclpy")
str = pyimport("std_msgs.msg")

# Initialize ROS2 runtime
rclpy.init()

# Create node
node = rclpy.create_node("my_publisher")

# Create a publisher, specify the message type and
the topic name
pub = node.create_publisher(str.String,
"infodev", 10)

# Publish the message `txt`
for i in range(1, 100)
    msg = str.String(data="Hello, ROS2 from Julia!
($(string(i)))")
    pub.publish(msg)
    txt = "[TALKER] " * msg.data
    @info txt
    rclpy.spin_once(node)
```

```
end

# Cleanup
node.destroy_node()
rclpy.shutdown()
```

In a newly opened terminal, we need to setup a subscriber that listens to the messages being broadcasted by our previous publisher<sup>1</sup>.

The graphical tool **rqt\_graph** of Figure 1 displays the flow of data between our nodes: *my\_publisher* and *my\_subscriber*, through the topic we designed *infodev*.

```
source /opt/ros/humble/setup.zsh
rqt_graph
```

ISET Bizerte -1/2 —

<sup>&</sup>lt;sup>1</sup>Remember to source ROS2 installation before using it with Julia

Figure 1: rqt\_graph

Figure 2 depicts the publication and reception of the message "Hello, ROS2 from Julia!" in a terminal. The left part of the terminal showcases the message being published, while the right part demonstrates how the message is being received and heard.

Figure 2: Minimal publisher/subscriber in ROS2

Figure 3 shows the current active topics, along their corresponding interfaces.

Figure 3: List of topics
